Apple ProRes Workflows

Quickly and Securely Process High-Resolution ProRes Files in the Cloud

Apple ProRes is a codec technology developed for high-quality, high-performance editing in Final Cut Pro X. The codec makes it possible and affordable to edit and playout full-frame, 10-bit, 4:2:2 and 4:4:4:4 video content at resolutions up to 8K, including features, commercials, Blu-ray and streaming video programs.

Encoding.com is the only cloud vendor licensed by Apple to encode and decode these files using the 64-bit Linux Apple ProRes library, allowing ProRes users to take full advantage of powerful cloud media processing for the first time. We support all versions of the codec, from 422 up to 4444, including 4444 XQ with PQ and HLG HDR metadata. By integrating ProRes codec encoding into the Encoding.com 64-bit Linux-based platform, we provide unmatched flexibility for our cloud-encoding customers.

Apple ProRes codecs combine multistream, real-time editing performance and impressive image quality with reduced storage rates. The codecs employ mult-core processing and feature fast, reduced resolution decoding modes. All frame sizes (including SD, HD, 2K, 4K, 5K and larger) are supported at full resolution. The data rates vary based on codec type, image content, frame size and frame rate.

As a variable bit rate (VBR) codec technology, ProRes uses fewer bits on simple frames that would not benefit from encoding at a higher data rate. All ProRes codecs are frame-independent (or “intra-frame”), meaning that each frame is encoded and decoded independently of any other frame, a technique that provides the greatest editing performance and flexibility.

Final Cut Pro 10.3 or later can process color in wide color gamut and output ProRes files in the Rec. 2020, DCI-P3 or D65-P3 color spaces. This results in deeper colors and more detail, with richer red and green areas of the image. You can export ProRes files inside an MXF metadata wrapper instead of exporting .mov to ensure that the exported video files are compatible with the wide range of playback systems that rely on the MXF standard for broadcast and archiving.

Easily move your ProRes workflows with the Encoding.com API

Package two or 2,000 ProRes files simultaneously in a fraction of realtime

Automate the customizing of ProRes files at scale for faster, more efficient workflows

Access Encoding.com’s complete suite of VOD-focused microservices
SIMPLE INTEGRATION
Encoding.com offers the most mature, well-documented and feature-rich cloud encoding API on the market, simplifying the ability to move your ABR processing to the cloud. We can integrate with your CMS, MAM or post-production application, and offer XML templates for all popular devices. To further simplify the integration process, our API Builder helps generate properly formatted XML files to test your JSON or XML requests before writing a single line of code.

CONTENT SECURITY
One of the highest priorities for enterprise M&E organizations is data security. To address this concern, Encoding.com takes multiple steps to ensure the safe-keeping of your content throughout the processing workflow. This emphasis on security is why industry leaders rely on us for processing their most precious assets.

Among the measures we employ are:
- Providing SSL-encrypted API calls and platform notifications
- Enabling AWS Secret Key or S3 Canonical ID account access control, with support for AWS S3 ACL permissions
- Containing both EC2 processing and S3 storage within AWS datacenters aligned with MPAA security guidelines
- Supporting accelerated and encrypted ingest and delivery with Aspera FASP technology

With more than one trillion API requests processed and a billion videos encoded, Encoding.com stands as the world’s largest and most trusted provider of high-volume, cloud-based video processing services. We pioneered transcoding-as-a-service more than a decade ago, empowering the world’s largest Media & Entertainment, Cable, Broadcast and Technology brands to monetize and deliver superior-quality VOD content to all mobile, desktop, IPTV and OTT platforms. Based in San Francisco, with offices in Aspen, CO, New York and St. Petersburg, Russia, we operate in public and private cloud data centers around the globe, assuring the fastest possible turnaround times for every client so that they can get to air first, grow their audience and stay ahead of the competition.
